Back-End Development  
Solar Estimation Model

# About This Project

- In partnership with a local company - Greenwave Innovations
- A tool that utilizes building consumption metrics and solar intensity data to calculate accurate ROIs
- Help to determine over or under generation windows and size solar generation solutions accordingly
- Alert of issues when dealing with real time data

# Project Activity Dates

**Dec. 6th, 2021 - Feb. 1, 2022**

- Project Bazaar Day #1
- Met with Greenwave Innovations and Dr. Yow
- Vlog #4
- Finished MVP 2

# Team Member Contributions

## Tristan

- Added map selection
- Added overlay of consumption using a .CSV file
- Switched from ApexCharts.js to highcharts.js
- Began progress on summary page
- Added UX to loading experience

## Kaden

- Added variables and tweaked solar estimation model
- Explored system losses and the effect of dust and snow

# Team Member Contributions

## Karlee

- Add new inputs for billing and solar installation
- Add tooltips for inputs
- Change date input to use date picker
- Gantt chart
- Trello Board
- Meeting minutes

## Group

- Met with Greenwave Innovations
- Met with Dr. Yow
- Received consumption data from Greenwave Innovations
- Project Bazaar #1
- Completed MVP 2

# Project Status

## Green

- MVP 2 Complete
- On track with our estimated project timeline from our Gantt chart

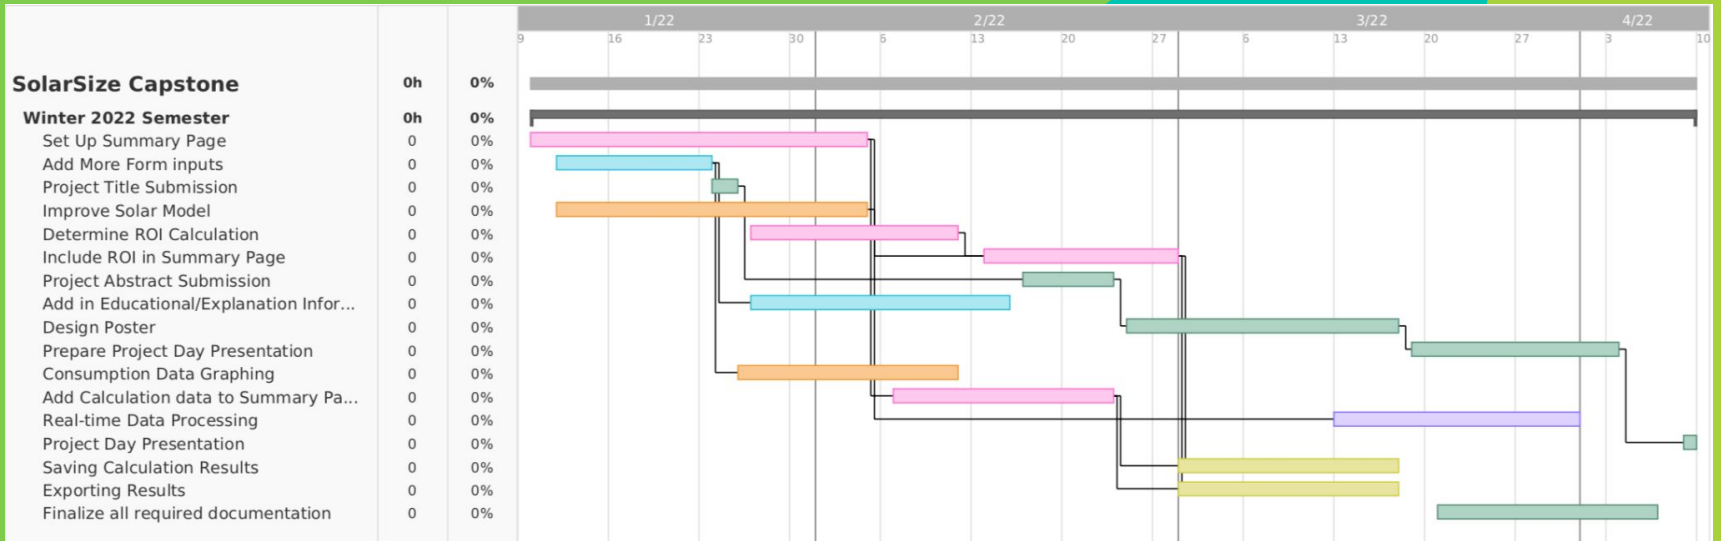

# Project Issues/Changes

- Lack of ROI and billing knowledge

# Gantt Chart

# Greenwave Feedback

**Solar Project Inputs**

Location: ☐ New or ☐ Select Existing Client

Address: \_\_\_\_\_  
or  
Latitude: \_\_\_\_\_  
Longitude: \_\_\_\_\_

Upload Consumption history  .CSV

**Solar Install information**

Panel direction: ie. S30°W

Panel Angle : ie 30°

Panel Type : ☒ Type X  
(or efficiency) //drop down

Inverter Type : ☒ Type A  
(or efficiency) //drop down

Billing Info: ☒ Residential  
☐ Industrial

Calculate:  or

All should Auto Calc.  
(w/ option to manual override)

# Demo

Module Area

Module Efficiency

Loss Coefficient

# Next Up

## Tristan

- Investigate SaskPower API for billing information
- Begin working on ROI calculations
- Implement additional inputs as needed for ROI calculations
- Add some error tolerance/feedback to form submit
- Add address support to map

## Kaden

- Implement physical sizing calculations
- Implement inverter inputs
- Automatic determination of angles and direction based on buildings

# Next Up

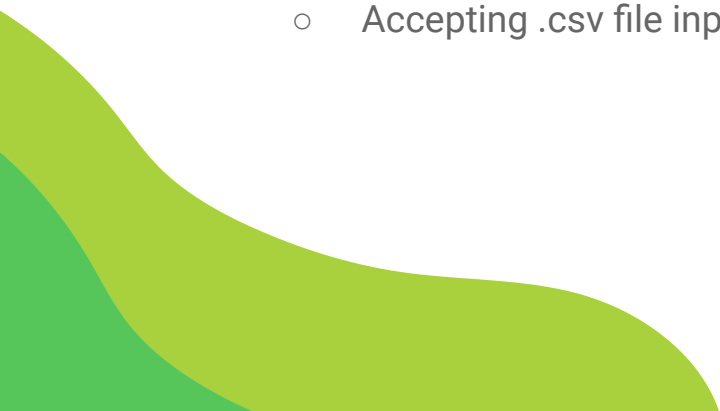

## Karlee

- Input form validation
- Look into calculations or results to display on summary page
- Explanation/educational information
- Look at saving location specific data
- UI improvements
- Documentation
- Meeting minutes

## Group

- Meet with Greenwave Innovations
- Meet with Dr. Yow
- Get ROI and billing information from Greenwave Innovations
- Complete project day requirements

# Team Reflection

- **Does the team feel "on track"?**
    - Green Status
    - Done MVP 2
  - **What progress does the team particularly feel good (great) about?**
    - Map input for location inputs (latitude and longitude)
    - Accepting .csv file input and graphing included consumption data
- 

# Team Reflection

- **What barriers (if any) does the team feel are a current impediment to success?**
  - None at this moment
- **What help (if any) does the team require to move positively forward?**
  - Greenwave Innovations' input on billing calculations and ROIs
- **What questions or concerns does the team have (if any)?**
  - No questions or concerns at this time

**Thanks for  
Watching!**
